

MAGs in GenBank – Feb 2021

- in August 2017 we stopped assigning isolate-specific taxids
 - OLD ex: *Aquabacterium* sp. UBA2148 (DCXA00000000)
 - NEW ex: Nitrospiraceae bacterium (eg, RPQD00000000)
- <https://www.ncbi.nlm.nih.gov/assembly> searches:
 - "derived from metagenome"[Filter]
 - = MAG assemblies
 - "genus undefined"[Filter]
 - = most of the MAGs in the above search plus other MAGs that did not have the /metagenome_source qualifier plus non-MAG assemblies
- In January 2020 we began using a new WGS accession format for all WGS genomes (6 letters + 9-11 zeroes), eg JACNKL000000000
